

CLP 2025 00094 Beach Rescue Stations progressive installation.

28<sup>th</sup> April 2026.

BPKTCA has progressively installed the first two of a planned four Beach Rescue Stations.

**Station 1 installed at Shell Beach/Mudholes** December 2025, funded by a donation.

**Station 2 installed at Bawley Beach** April 2026, funded by Bendigo Community Bank.

It is planned to install an additional two more community led beach rescue stations on the basis that

- Note there is already an NSW State Government funded, and Surf Life Saving operated automatic station at Racecourse Beach.
- The Community Association has requested Merry Beach(Ingenia) consider a station Merry Beach foreshore within the camping area, the final decision and funding on that facility rests with them.
- There is some concern in the community regarding the visual impact of the rescue stations, we consider four (4) is sufficient to greatly enhance the safety of the community and visitors to our unpatrolled beaches between Bawley Point and Kioloa.
- The BPKTCA has committed via executed deeds to inspect and maintain the Beach Rescue Stations for 10 years, if theft or wilful damage does not occur. The stations have been designed for a long durable life.
- Technology advances may make the equipment less impactful over time.

### Station 3 Murramarang Beach (new)

Planned installation, subject to Grants at Murramarang Beach, see locations details below.

Sited as an easy access point, at the location of existing signage and infrastructure.

Figure 1-Current Signage Murramarang Beach

Figure 2 Addition of a Rescue Station, Rescue Tube Station, remove top of post, relocate signs. The Rescue tube box will be behind the horizontal rail, the ABC... sign is a duplication, but could be instated if required. Council to confirm.

## Station 4 Gannet Beach (North) (new)

Planned installation Gannet Beach (North), subject to Grant Funding.

There are many options to place this station.

- It has been located within the reserve as between 22 and 24 Malibu Drive,
- The Critical Response (AED) cabinet and Beach Rescue Tube cabinets are proposed to be located approximately 60 metres in from the road on the right hand fence facing east, adjacent to the beach track.
- This minimises intrusion on the park vista but provides the emergency response equipment close to the beach and or nearby walking public, and or vehicular access to the AED(DFIB).
